

TR-8S GRID · EDGE BUTTON LABELS

Print on adhesive A4 with SCALE TO FIT (the usual default). Cut along the dashed square and stick each label onto its button.

Each label is 14.3 mm for a 15 mm button, so it sits inside the button face without an overhanging edge.

The rows are in physical order. The map at the bottom shows where each row goes.

PRE-SCALED 107.5% - a test print of the previous sheet measured 93 mm where it should read 100.

So do NOT ask for 100% - leave Scale to Fit on. Always measure the ruler on the result: if it is not 100 mm, regenerate with the new reading.

this line must measure exactly 100 mm

1 LEFT UNIT · top edge

variations, left to right

2 LEFT UNIT · left edge

top to bottom

3 RIGHT UNIT · top edge

left to right

4 RIGHT UNIT · right edge

velocity, top to bottom

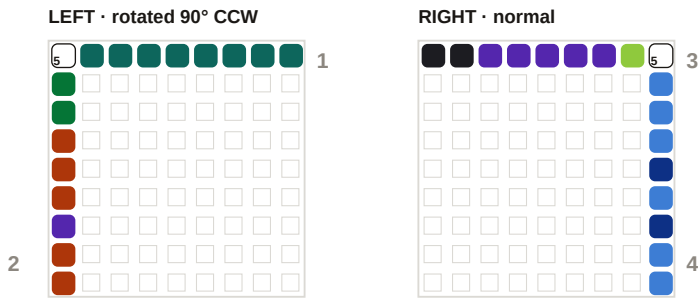

5 CORNER HEADERS · not buttons

the logo corners: VELOCITY on the right unit, VAR on the left

WHERE EACH ROW GOES

Not to scale - each label is cut out separately, so only its own size matters. Both units seen from above, as they sit on the desk.

Colour key: teal = variations · green = fills · light green = accent · black = instrument scroll

purple = step type · blue = velocity, dark blue = the two the machine itself uses · orange = batch edits

HIDE MUTED toggles: rows muted on the TR-8S drop out of the grid, or come back in purple (notes) and blue (flam/sub). Muting itself is the panel button.

ALT arms the alternate sound: the next pads record in pink. It only sounds on the 20 tones with a / in the name.

HIDE MUTED + ALT together bring the pads back from the off mode.

The corner logos are LEDs, not buttons. Their white labels (row 5) are headers for the edge next to them. Instrument scrolling: right unit only.
